Remote Control Description

Remote Control Features

The remote control sensors are located in the front/ back of the projector. The distance between the sensor and the remote control should not exceed 6 meters.

FREEZE

The image can be frozen when FREEZE is pressed. A “Pause” icon will appear in the lower right corner of the screen for three seconds. To release the freeze function, press the FREEZE button, RETURN button or SOURCE button (when the input source is switched over during display). A “Play” icon will appear in the lower right corner of the screen for three seconds when the freeze function is released.

ZOOM IN/OUT

By pressing ZOOM IN +, the center of the picture can be magnified. When the + button is pressed again, the picture is further magnified, up to four times the original size. By pressing ZOOM OUT -, the size of the image is reduced. When the - button is pressed again, the picture is further reduced until it is restored to its original size. To return to the normal display mode, press the RETURN button. (This function can be used in combination with FREEZE.)

Installing or Replacing Batteries

- Push and slide the battery compartment lid in the direction shown.
- Install CR2025 as indicated by the diagram inside the compartment.
- Position the lid over the compartment and snap it back into place.

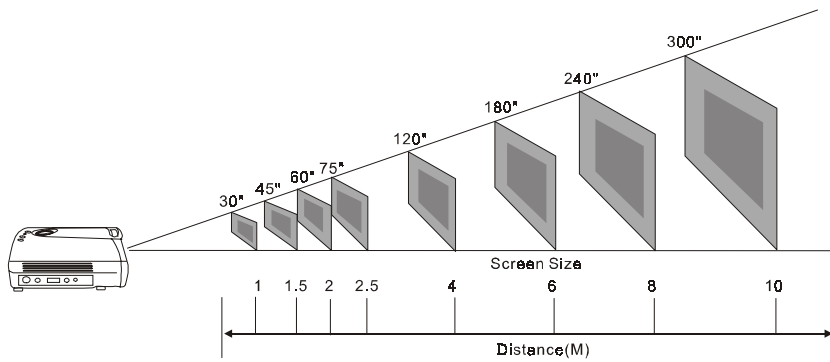

⚠ Caution

Avoid excessive heat and humidity. Danger of explosion if battery is incorrectly replaced. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

INSTALLATION

Screen Size

Place the projector at the required distance from the screen according to the desired picture size (see the table below).

| | | | | | | | | | | | | |
|-------------|-----|-----|-----|-----|-----|------|------|------|------|------|------|------|
| Max.Zoom | 30" | 45" | 60" | 75" | 90" | 120" | 150" | 180" | 210" | 240" | 270" | 300" |
| Distance(m) | 1 | 1.5 | 2 | 2.5 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |

Connecting to Various Equipment

It only takes a few seconds to connect your SL700 Series projector to your computer/notebook, VCR or other systems. However, a Mac adapter (an optional accessory) is needed for connection for Macintosh users.

OPERATION

Start Up

1. Plug the power cord into a wall socket.
2. Press POWER for 1 second.

- The back-lit POWER key blinks green and stays green when the power is turned on.
(When the power is turned off, there is a 60-second cooling period before the projector can be re-started.)
3. Switch on all connected equipment.

Digital Keystone Correction

Keystoning is when the projected image is noticeably wider on either the top or bottom. To correct this, press KEYSTONE +/- (hot key) on the control panel of the projector or on the remote control, then adjust the sliding bar labeled Keystone, as needed. Press + to correct keystoning at the top of the image. Press - to correct keystoning at the bottom of the image.

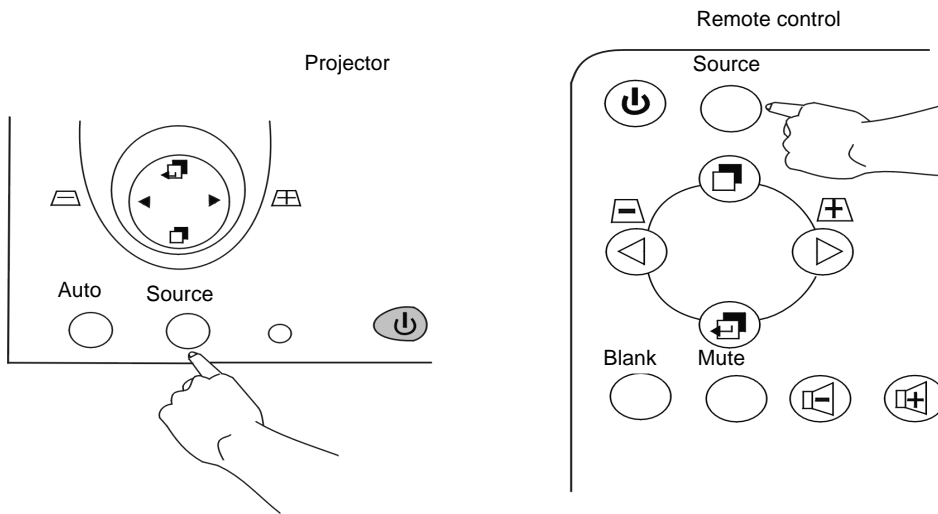

Auto Adjustment

In some cases, you may have to optimize the picture quality manually. To do this, press the AUTO key on the control panel of the projector or on the remote control. Within 3 seconds, the built-in Intelligent Auto Adjustment function of the Acer SL700X/S Series will present you the best picture quality.

Source Selection

When several input sources are available, press the SOURCE key to make a selection from the control panel of the projector or the remote control.

Menu System

Press **Menu** for the main menu and press ◀ or ▶ to select a sub-menu. Press **Menu** again to select items in the sub-menu.

Shutdown

1. Press POWER and the lamp will shut down.
2. The fan will continue to run for approximately 60 seconds.

3. Disconnect the power cord from the wall socket.

MAINTENANCE

Lamp Information

Use and Replacement of Lamp

The projector lamp lifetime normally is approximately 1200 to 1500 hours. During the normal lamp life, pictures and colors are projected brightly and crisply. Past the normal lamp life, colors and pictures may look faint.

An old lamp could cause a malfunction to the projector and may explode. When the Lamp Indicator lights up red or a message displays to suggest the time of lamp replacement, please change a new lamp or consult your dealer.

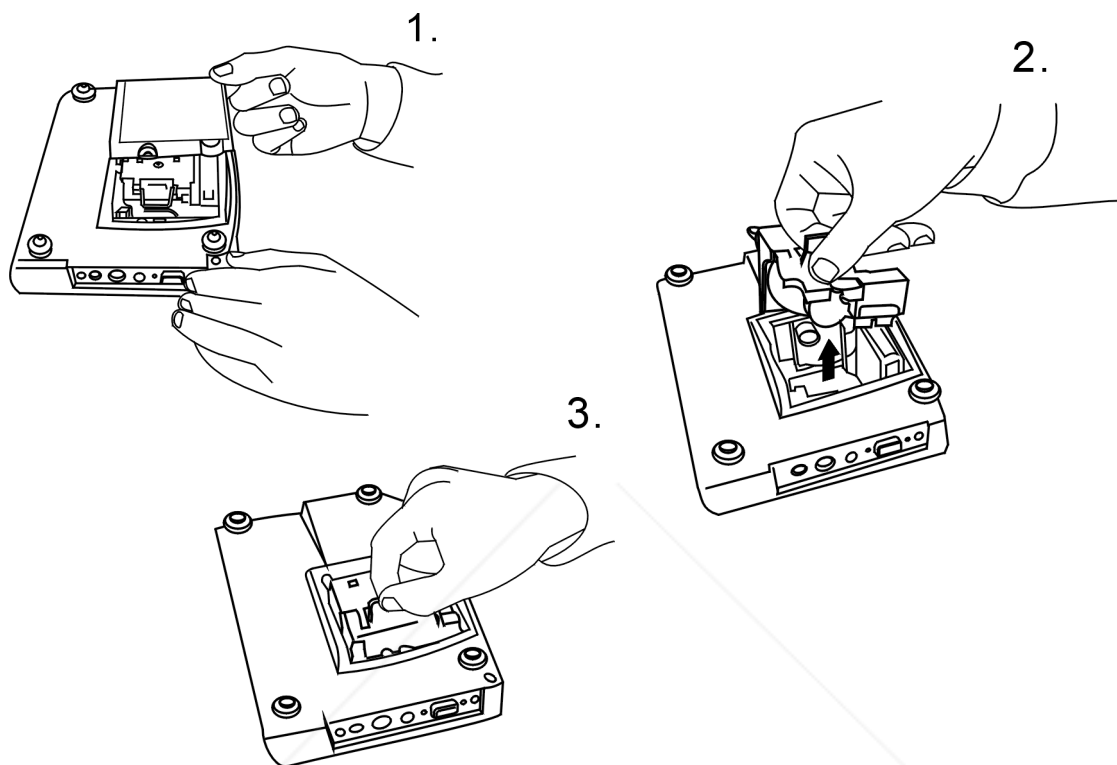

LED Status Indicators

| | |
|--|--|
| Lamp Life Indicators | When this LED shows red continuously, it is warning you that the lamp life has exceeded 1500 hours. Replace the projection lamp with a new one immediately. |
| CHANGE THE LAMP, AND RESET THE LAMP TIMER | The lamp has been in operation for 1200 hours. Change a new lamp for optimal performance. |
| CHANGE THE LAMP. THE POWER WILL TURN OFF AFTER 20 HOURS | The lamp has been in operation for 1479 hours, and the power will turn off after 20 hours. |
| CHANGE THE LAMP! | The lamp has been in operation for over 1500 hours, and the power will turn off automatically in 10 minutes. All of these messages will not display for more than 3 minutes, but each message will be displayed whenever you turn on the projector. |
| Lamp is not properly attached | LED blinks rapidly. |
| Temperature is too high | When the projector's internal temperature is too hot to operate safely, the LED blinks slowly for one minute and the lamp turns off automatically. If the LED light is off, the projector's lamp and temperature are operating under normal conditions. |
| <p> Caution The LAMP indicator will light if the lamp becomes too hot. Turn off the power and let the projector cool for 45 minutes. If the LAMP indicator is still red when turning the power on, please contact your dealer.</p> | |

Lamp Replacement

⚠ Caution

To reduce the risk of electrical shock, always turn off the projector and disconnect the power cord before changing the lamp.

1. Press the **POWER** button to switch off the projector and disconnect the power cord from the outlet.
2. Loosen the screw and remove the lamp cover. If the lamp is hot, avoid burns by waiting 45 minutes until the lamp has cooled.
3. Loosen the **3** screws indicated by the arrows above. (It is strongly recommended you use a magnetic-headed screwdriver, if possible. Pull the handle to remove the lamp housing. If the screws are not loosened completely, they could injure your fingers. Do not insert your hand into the box after the lamp is removed. If you touch the optical parts inside, this could cause color unevenness, etc.)
4. Replace the lamp with the new one. Insert it in the projector, and tighten the screws firmly. Loose screws may cause a bad connection, which may result in a malfunction.
5. Re-install the lamp cover and tighten the screw. **Do not turn on the power with the lamp cover removed.** Whenever the lamp is replaced, reset the total lamp operation time. Do not reset if the lamp is not replaced as this could cause breakage.

⚠ Caution

To reduce the risk of severe burns, allow the projector to cool for at least 45 minutes before replacing the lamp.

To reduce the risk of injuries to fingers and damage to internal components, use caution when removing lamp glass that has shattered into sharp pieces.

To reduce the risk of injuries to fingers and/or decreasing image quality by touching the lens, do not touch the empty lamp compartment when the lamp is removed.

This lamp contains mercury. Consult your local hazardous waste regulations to dispose of this lamp in a proper manner.

Resetting Lamp Hours

If you replace the lamp after 1500 hours of operation, please proceed as follows within 10 minutes of powering on.

| OSD | FUNCTION |
|-----|---|
| | Press the Exit button on the projector for 3 seconds to display the total used lamp time. |
| | Press the MENU button on the projector during the lamp hour message. An adjustment message will appear. |
| | <ul style="list-style-type: none"> Press ◀ or ▶ to select the setting. To select the default setting, select "Reset" (or "Cancel" to return to the default setting). Press EXIT to leave. |
